

PROJECT DESIGN PHASE-II

Solution Requirements (Functional & Non-functional)

Date	01 October 2026
Team ID	SWTID-2026-8273
Project Name	Implement Client Script & UI Policy (Incident)

Functional Requirements

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Form Data Entry	Allow users to enter Incident details through the Incident form.
FR-2	Conditional Field Control	Make selected Incident fields mandatory, visible/hidden, or read-only according to defined conditions using UI Policies and UI Policy Actions.
FR-3	Dynamic Client-side Behavior	Use Client Scripts to respond to changes in relevant Incident fields and update form behavior or values.
FR-4	Auto-Population	Automatically populate defined field values when the configured condition is satisfied.
FR-5	Form Validation	Validate required Incident information before submission using an onSubmit Client Script.
FR-6	Submission Control	Prevent Incident submission when defined validation conditions are not met and display a clear message.
FR-7	Data Quality	Ensure submitted Incident records contain the information required for effective triage, routing and reporting.

Non-functional Requirements

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Controls should guide users clearly without unnecessary manual checking.
NFR-2	Security	Client-side controls operate within ServiceNow user access and role permissions; they are not a replacement for server-side security.
NFR-3	Reliability	Configured UI Policies and Client Scripts should execute consistently for defined Incident conditions.
NFR-4	Performance	Client-side logic should be lightweight and avoid unnecessary form processing or repeated operations.
NFR-5	Availability	The solution should be available whenever the ServiceNow Incident form is available to authorized users.
NFR-6	Maintainability	Rules, scripts, conditions and messages should be clearly named and documented so administrators can update them.
