

PROJECT DESIGN PHASE-II

Technology Stack (Architecture & Stack)

Date	01 October 2026
Team ID	SWTID-2026-8273
Project Name	Implement Client Script & UI Policy (Incident)

Technical Architecture

The proposed solution is implemented within the ServiceNow platform. The user interacts with the Incident form; UI Policies and Client Scripts provide client-side controls; the resulting Incident record is stored in the ServiceNow platform data layer and becomes available for Incident Management activities.

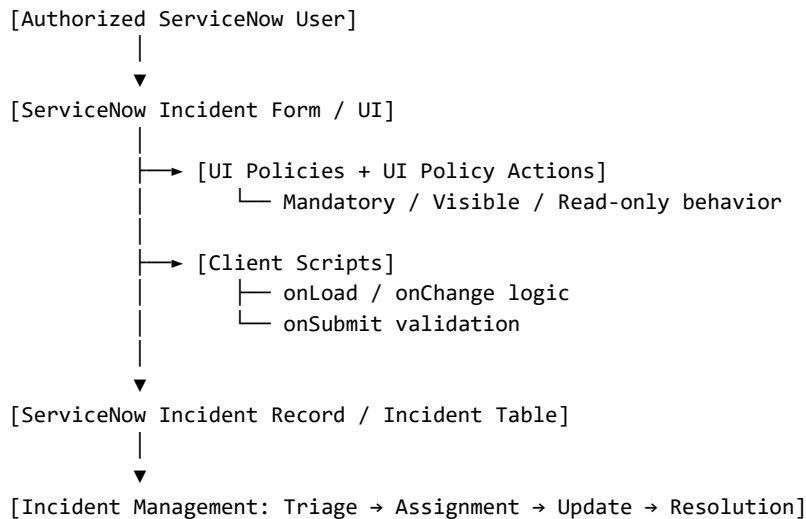

Table-1: Components & Technologies

S.No	Component	Description	Technology
1	User Interface	ServiceNow Incident form used by authorized users to create and update Incident records.	ServiceNow Web UI / Incident Form
2	Application Logic-1	Conditional field behavior such as mandatory, visible/hidden and read-only controls.	UI Policy / UI Policy Actions
3	Application Logic-2	Dynamic client-side behavior and field value handling.	Client Scripts / JavaScript / GlideForm
4	Application Logic-3	Save-time validation and submission control.	onSubmit Client Script / GlideForm
5	Database	Storage of Incident records and platform data.	ServiceNow Platform Data Layer / Incident [incident] table
6	Cloud Database	Managed platform data service used by the ServiceNow instance.	ServiceNow-hosted platform data layer
7	File Storage	Not required for the core client-side implementation.	Not applicable
8	External API-1	No external API is required for the core solution.	Not applicable
9	External API-2	No external API is required for the core solution.	Not applicable
10	Machine Learning Model	No machine learning model is	Not applicable

		required.	
11	Infrastructure (Server / Cloud)	ServiceNow provides the hosted application environment and execution platform.	ServiceNow Cloud / ServiceNow Instance

Table-2: Application Characteristics

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	No external open-source application framework is required for the core solution.	ServiceNow platform; JavaScript
2	Security Implementations	Use ServiceNow authentication, roles and ACL-based access controls. Client Scripts/UI Policies handle form behavior, not authorization.	ServiceNow roles / ACLs / platform security
3	Scalable Architecture	Lightweight client-side form logic executes within the ServiceNow platform and uses the existing platform architecture.	ServiceNow platform architecture
4	Availability	The solution is available with the ServiceNow instance and Incident form for authorized users.	ServiceNow hosted environment
5	Performance	Use condition-based, lightweight Client Scripts and UI Policies; avoid unnecessary client calls and repeated processing.	JavaScript / GlideForm / UI Policies
