

IDEATION PHASE

Empathize & Discover – Empathy Map Canvas

Date	01 October 2026
Team ID	SWTID-2026-8273
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	As per template

User Persona

Primary user: Service Desk Agent / Incident User who creates and updates Incident records in ServiceNow.

THINK & FEEL • I want to create the Incident correctly the first time. • I want the form to guide me instead of making me remember every rule. • I worry that missing information may delay triage or routing. • I prefer clear validation messages when something needs correction.	HEAR • Complete all required Incident information. • Follow the organization's Incident Management process. • Provide accurate information for proper assignment and resolution. • Correct missing information before submitting the record.
SEE • Incident forms containing many fields. • Different fields becoming relevant depending on selected values. • Mandatory fields and validation messages. • Existing records with inconsistent or incomplete information.	SAY & DO • Enter Incident details and select relevant field values. • Change Category, Impact, Urgency, or other fields during form entry. • Check messages when the system asks for missing information. • Submit the Incident after completing the required details.
PAIN • Incomplete or inconsistent Incident data. • Unclear field requirements. • Manual checking before submission. • Incorrect routing or delayed triage caused by missing information. • Repeated corrections after an Incident is submitted.	GAIN • Clear and guided Incident entry. • Consistent and accurate records. • Automatic field behavior where applicable. • Faster and more reliable triage and routing. • Better reporting and overall service quality.

Empathy Insight

Users need Incident forms that provide immediate, understandable guidance and enforce defined rules without adding unnecessary effort. Client Scripts and UI Policies can address these needs directly at the form level.
