

IDEATION PHASE

Define the Problem Statements

Date	01 October 2026
Team ID	SWTID-2026-8273
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	As per template

Customer Problem Statement Template

The following statements are framed from the perspective of users who create or manage Incident records.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a Service Desk Agent / Incident User	create an Incident quickly with complete and accurate information	some fields may remain incomplete, inconsistent, or incorrectly entered	the form does not always enforce conditional field behavior and validation at the user interface level	uncertain about whether the Incident is ready for correct triage and routing
PS-2	an Incident Manager / ServiceNow Administrator	maintain consistent and reliable Incident data	users may submit records without following required business rules	manual checks alone are not sufficient for consistent data entry and save-time validation	concerned about data quality, reporting accuracy, SLA compliance, and service consistency

Consolidated Problem Statement

Incident records require consistent and accurate data entry for effective triage, routing, reporting, and resolution. Without standardized client-side controls, users may submit incomplete or inconsistent data. Therefore, UI Policies and Client Scripts are needed to dynamically control field behavior, populate values where applicable, validate required information, and prevent invalid Incident submissions.
