

User Acceptance Testing (UAT) Template

Date	01 October 2026
Team ID	SWTID-2026-2615
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	

Project Overview:

Project Name: Implement Client Script & UI Policy (Incident)

Project Description: Implementation of UI Policies and Client Scripts on the ServiceNow Incident form to make fields mandatory or read-only based on conditions, show messages to users and validate input before an incident is submitted.

Project Version: 1.0

Testing Period: 27 September 2026 to 01 October 2026

Testing Scope:

Features and functionalities to be tested: UI Policy (Short description mandatory, Resolution code and Resolution notes mandatory, Assigned to read-only, Reverse if false); Client Script (onLoad, onChange on Category, onChange on Priority, onSubmit validation); Update Set capture.

User stories or requirements to be tested: USN-5 to USN-12 (UI Policy and Client Script implementation), verified through USN-13 and USN-14 (testing).

Testing Environment:

URL/Location: <https://<instance-name>.service-now.com> (ServiceNow Personal Developer Instance), Incident module

Credentials (if required): Admin user of the team's Personal Developer Instance (shared within the team, not recorded in this document)

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Short description left blank (negative)	1. Login to the instance. 2. Incident > Create New. 3. Leave Short description blank, State = New. 4. Click Submit.	Short description is mandatory; error shown; incident not created	Submission blocked with mandatory field error	Pass
TC-002	Short description entered (positive)	1. Incident > Create New. 2. Enter 'Laptop not connecting to Wi-Fi'. 3. Click Submit.	Incident is created successfully	Incident created with a new INC number	Pass
TC-003	Resolve without resolution details (negative)	1. Open an existing incident. 2. Set State = Resolved. 3. Leave Resolution code and notes empty; Update.	Both fields mandatory; update blocked	Update blocked; both fields marked mandatory	Pass
TC-004	Resolve with details and reverse state (positive)	1. Set State = Resolved, fill Resolution code and notes, Save. 2. On another incident, set Resolved then change back to In Progress.	Saved successfully; fields optional again after State changes back	Saved; fields stayed mandatory at first (BG-003), fixed and retested	Pass
TC-005	Assigned to read-only	1. Incident > Create New. 2. Try to edit Assigned to. 3. Select Assignment group; try again.	Read-only until Assignment group is selected	Read-only before selection; editable after	Pass
TC-006	onChange - Category	1. Select Category and Subcategory. 2. Change Category.	Subcategory cleared; information message displayed	Subcategory cleared; message shown	Pass
TC-007	onChange - Priority Critical	1. Set Impact and Urgency to High (Priority 1 - Critical).	Warning message displayed	Warning shown; message text had a typo (BG-004), fixed	Pass

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-008	onLoad - new vs existing incident	1. Open a new Incident form. 2. Open an existing incident.	Message and defaults only on new form	Message also appeared on existing records (BG-002), fixed and retested	Pass
TC-009	onSubmit - invalid Short description (negative)	1. Enter 'Help' or only spaces in Short description. 2. Click Submit.	Error message shown; submission stopped	Spaces-only text was accepted (BG-001), fixed; now blocked	Pass
TC-010	onSubmit - valid Short description (positive)	1. Enter a description of 10 or more characters. 2. Click Submit.	Incident saved with no error	Incident saved	Pass
TC-011	Incident list inline editing	1. Open the Incident list. 2. Change Category using list inline edit.	Client Script applies to the form only; list edit saves normally	Saved without script (as designed, BG-005)	Pass
TC-012	Update Set completeness	1. Open Update Set Incident_ClientScript_UIPolicy. 2. Review Customer Updates.	All UI Policies and Client Scripts captured	All records captured	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	onSubmit script accepted a Short description containing only spaces	1. Create New incident. 2. Enter spaces in Short description. 3. Submit.	High	Closed	Fixed: value trimmed before length check. Retested OK.
BG-002	onLoad message shown on existing incidents	1. Open an existing incident. 2. Observe message.	Medium	Closed	Fixed: script now runs only for new records.
BG-003	Resolution fields stayed mandatory after State changed back from Resolved	1. Set State = Resolved. 2. Change State to In Progress.	High	Closed	Fixed: 'Reverse if false' enabled on the UI Policy.
BG-004	Spelling mistake in Critical priority warning message	1. Set Priority to 1 - Critical. 2. Read message.	Low	Closed	Fixed: message text corrected.
BG-005	onChange Client Script does not run on list inline edit	1. Incident list. 2. Change Category inline.	Medium	Closed	By Design: Client Scripts run on the form only.
BG-006	Error message color differs in the Next Experience UI	1. Submit blank Short description in Next Experience UI.	Low	Closed	Won't Fix: styling controlled by the platform theme.

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
